INSPIRING KNOWLEDGE EDUCATION SOFTWARE

Corinth

Corinth 3D

Corinth is an interactive education app for the modern classroom.

With over 750 interactive 3D models containing top-quality digital content, it helps teachers to improve their classroom and to simplify some of the most difficult scientific topics with immersive content that makes learning fun.

The 3D interactive models, available in offline, are divided in 10 categories ranging from biology to chemistry and even culture. The quality content and accuracy are guaranteed by our expert partners at top global universities (e.g. Charles University, Stanford University, etc).

Corinth is designed for teachers and students at the elementary and high school level (K-12), more specifically for grades 5–9. However, the content is suitable for anyone with a curious mindset and an appreciation for new perspectives.

- Increased motivation and improved test scores among students
- Engaging instruction and easier classroom preparation for teachers
- Effective use of technology in schools

Main features:

- More than 750 3D interactive models from the fields of natural science and polytechnics;
- Integration with Microsoft 365 and Microsoft Office 2013–2019 for the use of models in presentations and other learning materials;
- Ability to rotate a model and highlight any part for better understanding;
- Detailed microscopic zoom images;
- Information about each model;
- Each model has the blind map function for testing student knowledge; Option to make your own notes to each model;
- Ability to switch between language versions and display two languages at one time.
