Environmental Policy

JP Sá Couto is committed to advancing technological progress responsibly, ensuring that innovation and development do not compromise environmental balance.

This Environmental Policy is fully aligned with the company's sustainability strategy, serving as a core pillar of its business model and contributing to the creation of lasting value for employees, customers, partners and the wider community.

We recognize our responsibility to operate in an environmentally responsible manner, ensuring compliance with all applicable legal, regulatory and normative requirements, while continuously improving the effectiveness of our Management System.

In this context, JP Sá Couto is committed to:

- **Protecting the environment** by preventing and minimizing negative environmental impacts, promoting the rational use of natural resources across all areas of our operations, products and services, and actively contributing to the company's sustainable development.
- **Continuously improving energy efficiency** through the development of sustainable products throughout their life cycle, the optimization of energy use and consumption, investment in renewable energy technologies, and the reduction of resource consumption.
- **Ensuring business continuity** by anticipating and preventing risks associated with climate change, while safeguarding the resilience of our operations and value chain.
- **Managing resources and waste efficiently** by integrating circular economy practices that reduce material consumption and waste generation, increase reuse and recycling, and support the selection of more sustainable solutions, thereby minimizing the environmental impact of our activities.

Through these commitments, we reinforce our vision for the future: to build, every day, a company that is more sustainable, more responsible, and better prepared to address environmental challenges.
